Market Forecast for 2014 Quarter 2: Seeing the Trades in Stock Indices, Currencies, Precious Metals and Commodities (Trading On The Mark) Tom Pizzuti, Kurt Hulse

There are hundreds of books that instruct the reader in trading methods, technical analysis and money management. This publication is different, because it provides an understanding of **current** market opportunities and conditions. Readers who are already familiar with trading methods will find that this book offers the missing piece—expert identification of specific areas in price and time where trades may be viable in 24 heavily traded markets.

Authors Tom Pizzuti and Kurt Hulse have provided technical analysis and trading guidance to subscribers at www.tradingonthemark.com since 2008. Although the website offers guidance to traders on daily and intraday timeframes, this publication emphasizes finding profitable trades on timeframes of weeks to months.

The skilled active trader will almost always profit more than the "buy and hold" investor, because real markets go up, down and often sideways. While the investor puts funds into a market and hopes for the best, the trader hunts for precise entry and exit opportunities to ride swings in either direction.

However, at any given time, there is not always a trade available in every market. Profitable trading on a timeframe of weeks or months requires diligent monitoring of numerous markets. Normally the trader must sift through a great deal of analysis to cull out the instances where the direction is too uncertain or the entry window is already past. Clearly it helps if the trader can see the opportunities approaching ahead of time, and that is the insight the authors provide.

This publication by Trading On The Mark includes detailed technical analysis of monthly and weekly charts for markets that can be traded long or short via futures contracts, options, and exchange-traded funds.

U.S. equity indices: NYSE Composite Index, Dow Jones Industrial Average, S&P 500 Index, S&P 100 Index, S&P 400 Midcap futures, Russell 2000 Index, NASDAQ 100 Index, KBW Bank Index, NASDAQ Bank Index

Non-U.S. equity indices: Global Dow Index, German DAX Index, Euro STOXX 50 Index, London FTSE 100 Index, Australian ASX 200 Index, Shanghai Composite Index

Interest rates: U.S. 30-year treasury bonds

Currencies: U.S. Dollar Index, Euro, British Pound, Japanese Yen, Australian Dollar

Metals: Gold, Silver, Copper

TOTM's technical approach is grounded in Elliott wave and Gann techniques, while also making use of Fibonacci relationships in price and time, historical cycles analysis, proprietary technical indicators, and other more esoteric approaches. Readers will benefit from some prior knowledge of Elliott wave theory, but it is not essential.
