### Categorical Structure of Closure Operators: With Applications to Topology, Algebra and Discrete Mathematics (Mathematics and Its Applications)

Dikran Dikranjan, Walter Tholen

Categorical Structure of Closure Operators: With Applications to Topology, Algebra and Discrete Mathematics (Mathematics and Its Applications) Dikran Dikranjan, Walter Tholen Our motivation for gathering the material for this book over aperiod of seven years has been to unify and simplify ideas which appeared in a sizable number of re search articles during the past two decades. More specifically, it has been our aim to provide the categorical foundations for extensive work that was published on the epimorphism- and cowellpoweredness problem, predominantly for categories of topological spaces. In doing so we found the categorical not ion of closure operators interesting enough to be studied for its own sake, as it unifies and describes other significant mathematical notions and since it leads to a never-ending stream of ex amples and applications in all areas of mathematics. These are somewhat arbitrarily restricted to topology, algebra and (a small part of) discrete mathematics in this book, although other areas, such as functional analysis, would provide an equally rich and interesting supply of examples. We also had to restrict the themes in our theoretical exposition. In spite of the fact that closure operators generalize the uni versal closure operations of abelian category theory and of topos- and sheaf theory, we chose to mention these aspects only en passant, in favour of the presentation of new results more closely related to our original intentions. We also needed to refrain from studying topological concepts, such as compactness, in the setting of an arbitrary closure-equipped category, although this topic appears prominently in the published literature involving closure operators.

#### From reader reviews:

#### **James Collis:**

Information is provisions for those to get better life, information these days can get by anyone from everywhere. The information can be a information or any news even a problem. What people must be consider if those information which is from the former life are hard to be find than now's taking seriously which one works to believe or which one the particular resource are convinced. If you get the unstable resource then you buy it as your main information you will see huge disadvantage for you. All of those possibilities will not happen throughout you if you take Categorical Structure of Closure Operators: With Applications to Topology, Algebra and Discrete Mathematics (Mathematics and Its Applications) as your daily resource information.

#### **Anthony Sierra:**

Reading a book can be one of a lot of task that everyone in the world adores. Do you like reading book consequently. There are a lot of reasons why people fantastic. First reading a book will give you a lot of new details. When you read a e-book you will get new information mainly because book is one of many ways to share the information as well as their idea. Second, looking at a book will make anyone more imaginative. When you looking at a book especially hype book the author will bring you to definitely imagine the story how the people do it anything. Third, you could share your knowledge to other individuals. When you read this Categorical Structure of Closure Operators: With Applications to Topology, Algebra and Discrete Mathematics (Mathematics and Its Applications), you can tells your family, friends and soon about yours reserve. Your knowledge can inspire the others, make them reading a guide.

#### **Claude Gonzalez:**

The actual book Categorical Structure of Closure Operators: With Applications to Topology, Algebra and Discrete Mathematics (Mathematics and Its Applications) has a lot details on it. So when you read this book you can get a lot of advantage. The book was authored by the very famous author. Mcdougal makes some research ahead of write this book. This specific book very easy to read you may get the point easily after looking over this book.

#### **Dominic Maddock:**

Playing with family within a park, coming to see the coastal world or hanging out with pals is thing that usually you will have done when you have spare time, after that why you don't try thing that really opposite from that. 1 activity that make you not feeling tired but still relaxing, trilling like on roller coaster you are ride on and with addition associated with. Even you love Categorical Structure of Closure Operators: With Applications to Topology, Algebra and Discrete Mathematics (Mathematics and Its Applications), you may enjoy both. It is very good combination right, you still need to miss it? What kind of hang type is it? Oh
