## Silicon Carbide Biotechnology: A Biocompatible Semiconductor for Advanced Biomedical Devices and Applications

Silicon Carbide (SiC) is a wide-band-gap semiconductor biocompatible material that has the potential to advance advanced biomedical applications. SiC devices offer higher power densities and lower energy losses, enabling lighter, more compact and higher efficiency products for biocompatible and long-term in vivo applications ranging from heart stent coatings and bone implant scaffolds to neurological implants and sensors.

The main problem facing the medical community today is the lack of biocompatible materials that are also capable of electronic operation. Such devices are currently implemented using silicon technology, which either has to be hermetically sealed so it cannot interact with the body or the material is only stable in vivo for short periods of time.

For long term use (permanent implanted devices such as glucose sensors, brain-machine-interface devices, smart bone and organ implants) a more robust material that the body does not recognize and reject as a foreign (i.e., not organic) material is needed. Silicon Carbide has been proven to be just such a material and will open up a whole new host of fields by allowing the development of advanced biomedical devices never before possible for long-term use in vivo.

This book not only provides the materials and biomedical engineering communities with a seminal reference book on SiC that they can use to further develop the technology, it also provides a technology resource for medical doctors and practitioners who are hungry to identify and implement advanced engineering solutions to their everyday medical problems that currently lack long term, cost effective solutions.

- Discusses Silicon Carbide biomedical materials and technology in terms of their properties, processing, characterization, and application, in one book, from leading professionals and scientists
- Critical assesses existing literature, patents and FDA approvals for clinical trials, enabling the rapid assimilation of important data from the current disparate sources and promoting the transition from technology research and development to clinical trials
- Explores long-term use and applications in vivo in devices and applications with advanced sensing and semiconducting properties, pointing to new product devekipment particularly within brain trauma, bone implants, sub-cutaneous sensors and advanced kidney dialysis devices

### **From reader reviews:**

#### **James Shaw:**

What do you ponder on book? It is just for students because they're still students or it for all people in the world, what the best subject for that? Simply you can be answered for that query above. Every person has various personality and hobby per other. Don't to be compelled someone or something that they don't want do that. You must know how great and important the book Silicon Carbide Biotechnology: A Biocompatible Semiconductor for Advanced Biomedical Devices and Applications. All type of book is it possible to see on many sources. You can look for the internet solutions or other social media.

#### **Sylvia Dozier:**

Reading a book can be one of a lot of activity that everyone in the world really likes. Do you like reading book so. There are a lot of reasons why people enjoyed. First reading a publication will give you a lot of new facts. When you read a book you will get new information since book is one of numerous ways to share the information as well as their idea. Second, looking at a book will make you more imaginative. When you studying a book especially fiction book the author will bring one to imagine the story how the people do it anything. Third, it is possible to share your knowledge to some others. When you read this Silicon Carbide Biotechnology: A Biocompatible Semiconductor for Advanced Biomedical Devices and Applications, it is possible to tells your family, friends along with soon about yours book. Your knowledge can inspire the mediocre, make them reading a publication.

#### **Della Francis:**

Reading can called thoughts hangout, why? Because if you find yourself reading a book specially book entitled Silicon Carbide Biotechnology: A Biocompatible Semiconductor for Advanced Biomedical Devices and Applications your head will drift away trough every dimension, wandering in every aspect that maybe mysterious for but surely might be your mind friends. Imaging just about every word written in a publication then become one type conclusion and explanation this maybe you never get before. The Silicon Carbide Biotechnology: A Biocompatible Semiconductor for Advanced Biomedical Devices and Applications giving you yet another experience more than blown away your mind but also giving you useful facts for your better life within this era. So now let us present to you the relaxing pattern the following is your body and mind will be pleased when you are finished examining it, like winning an activity. Do you want to try this extraordinary paying spare time activity?

#### **Robert Beaubien:**

Is it a person who having spare time in that case spend it whole day by watching television programs or just telling lies on the bed? Do you need something totally new? This Silicon Carbide Biotechnology: A Biocompatible Semiconductor for Advanced Biomedical Devices and Applications can be the reply, oh how comes? It's a book you know. You are so out of date, spending your spare time by reading in this new era is

common not a geek activity. So what these guides have than the others?
