Distinctive Features

***A Review of Basic Principles.** To ensure that all students are sufficiently prepared for acquiring a meaningful understanding of biochemistry, the first four chapters - now streamlined for easier coverage and self-study assignment - review the principles of relevant topics such as organic functional groups, noncovalent bonding, thermodynamics, and cell structure.

***Chemical and Biological Principles in Balance.** Comprehensive coverage offers the flexibility for each instructor to decide how much chemistry or biology to present. Chemical mechanisms are always presented

within the physiological context of the organism.

***Real-World Relevance.** Because students who take the survey of biochemistry course come from a range of backgrounds and have diverse career goals, the fifth edition consistently demonstrates the fascinating connections between biochemical principles and the fields of medicine, nutrition, agriculture, bioengineering, and forensics.

***The most robust Problem-Solving Program available.**

· In-chapter "Worked Problems" illustrate how quantitative problems are solved and provide students with opportunities to put their knowledge into action right when new concepts are introduced. Dozens of "Questions" are interspersed throughout the chapters, getting students critically thinking about high-interest topics. Finally, hundreds of multiple-choice and short-answer questions at the end of the chapters test students' knowledge, develop their conceptual understanding, and encourage them to apply what they have learned.

***Simple, Clear Illustrations.** Biochemical concepts often require a high degree of visualization, and the McKee & McKee art program brings complex processes to life. Over 700 full-color figures, many newly enhanced for a more vivid presentation in three dimensions and consistent scale and color for chemical structures.

***Currency.** The fifth edition has been extensively updated with recent developments in the field, while remaining focused on the "big-picture" principles that are the focus of the one-term biochemistry course.

New to this Edition

***Chapter-opening Vignettes**, an all-new feature of the fifth edition, give biological motivation. These 19 essays include the nature and diversity of life, the ocean's dark secret life, spider silk, humans and enzymes, sweet and bitter taste in diet, metabolism and jet engines, evolution as chance and necessity, oxygen's molecular paradox, global warming and renewable energy, the Gulf dead zone, Parkinson's disease and Alzheimer's, hypertension and uric acid, what makes us human, the medical mystery of DNA and chimeras, and the superbug MRSA

***New "Biochemistry in Perspective" boxes** (9 new in all), each with an opening question and concluding summary, show students the real-world relevance of the biochemical processes they are studying. The fifth edition includes new essays on cell regulation and metabolism, protein folding and human disease, quantum tunneling and catalysis, wine production, turbo design dangers, myocardial infarct, the hormone cascade system, and trapped ribosomes

***New "Biochemistry in the Lab" boxes** on protein sequence analysis and glycomics

***Increase in chemical coverage** with increased emphasis on mechanisms

***Enhanced coverage of cutting-edge topics** including RNAi, epigenetics and the epigenome, macromolecular crowding, GLUT transporters, systems biology, and the contribution of dietary fructose to the current epidemics of obesity and type II diabetes

***In-Chapter "Key Concept" lists (more than 100 bulleted summaries with icons)**, plus more than 100 icons for biomedical applications with new labels identifying the application. Other icons point to JMOL visualization software.

***20% more end-of-chapter review and thought questions** test knowledge, develop conceptual understanding, and encourage students to apply what they have learned

***Updated coverage** of coenzymes, viruses, and biotechnology

***Extended coverage** of amino acids, proteins, enzymes, carbohydrates, nucleic acids, and genetic information--the basic building blocks--and trimmed down coverage of metabolism (especially nitrogen metabolism)

***The entire text is now tied to NEW Sapling Learning online homework system!** Oxford University Press has partnered with Sapling Learning to produce an online homework and instructional solution for *Biochemistry: The Molecular Basis of Life* textbook. The text that presents the coverage you need with the

relevance your students want is now available with the most powerful online homework system in the industry.
